

Callista® Light

Basic, easy call management

Callista@Light has been specifically designed for use in small business and hospitality properties requiring simple call accounting functions. The system is perfectly suited for use in small motels/hotels or call shops where the public has access to telephones for local, national, international, mobile and internet calls. Callista@Light works in conjunction with the powerful Callista® Call Processor to simultaneously log and process all calls.

Main features

- Easy-to-use, user friendly interface for fast room/extension allocation and invoice/report printing
- Display calls for each room/extension on a real-time monitor to access information about calls such as the number dialled, the duration of the call, the destination of the call and the call charge, including the total of all calls for each telephone
- Easy to use invoicing ensures all calls are accounted for and that no errors are made by eliminating the need to manually add the cost of calls from a room/extension
- Calls are automatically flagged as paid after invoice printing to eliminate call allocation errors
- Add margins to all or any call types to add value to each call
